Lino

A complete chart system that suites everybody

Lino is a chart system specially developed for leisure boats, fishing vessels, coastal and offshore commercial shipping. The system is very easy to use, and displays the best vector charts available.

One of the hallmarks of Lino is the fast operation and its clear presentation of charts making it a joy to be on the sea. The charts available in Lino are delivered by official authorities, and used by the world's commercial shipping fleets.

Lino is based on our already successful Olex professional chart system, which has been installed on over 1400 vessels worldwide.

Safe navigation is a breeze with Lino

- Easy route planning
- Saves all trips automatically
- Converts all trips to autopilot routes
- Extremely fast and seamless zooming
- North up, bow up, optional chart rotation
- Unlimited storage of plotter data
- Connects to GPS, radar, gyro, compass, autopilot, wind sensor etc.

Terrific handling of the best vector charts available

- Official ENC's from IC-ENC
- Official ENC's from Primar Stavanger
- S57 from NOAA, Chartworld and others

Additional features

- Can be connected to AIS (Automatic Identification System)
- Prepared for upgrade to Olex which offers the revolutionary seafloor mapping and 3D-visualization of the seafloor

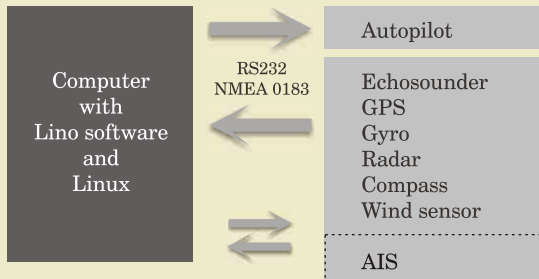

Olex

Packages available

- 1 Lino in desktop PC**
 The Lino software can be installed on a desktop PC. This will especially suit fishing boats and larger vessels. In addition you will need a screen, 220V power and GPS.
- 2 Complete package - Lino installed on a laptop PC with GPS sensor and 12V adaptor**
 Suits everybody - unwrap the box and sail off!

System specification

Upgrade your Lino

You can upgrade the Lino to a full Olex system including features like seafloor mapping and a 3D visualization of the seafloor. The Olex 3D chart system has established itself as being the most advanced 3D bottom profiling chart plotter system available in the market today. Customers are benefitting from the Olex's unique features throughout the fishery, aquaculture, fish farming, oil exploration and research markets.

Radar targets

True wind

Animated lights

Great circle navigation

Grid lines

Tide

Moon phase
